The new training center of Panama’s National Institute for vocational training and human resource development (Instituto Nacional de Formación Profesional y Capacitación para el Desarrollo Humano – INADEH) will soon open its doors. It aims at strengthening the regional economy by training qualified workers.

Authorities equipped new labs and workshops with many training systems from Lab-Volt. Lab-Volt’s instructors also trained the Institute teachers to help them make the most out of the equipment and curriculum. They then will teach mechatronics, industrial refrigeration and maintenance, fire alarms systems, among others. This 7 million USD project will give a fresh impetus to the vocational and technical training in Panama.
